

# NetLimiter

NetLimiter is small utility for a limit your daily spent time on the Internet. With NetLimiter, you can easy limit daily Internet time and prevent your kids (or yourself) from spending a lot of time (and money) on the net every day. This is very useful if you or your kids, like most of us lose sense for time when log-on to network. Using is very simply, only unpack file NetLimit.exe in any folder (except directly on root of HD) and start it, then set options. You must set the password and daily limit and that's all. When you connect to network NetLimiter start counting and when limit is reach, automatic disconnect. Of course, there are some usual options like "Start with Windows" and "Run minimized". Also you can disable monitoring, if you only want to limit time when you are away, if you right click on tray icon (near to system clock). Registered users also can disable MS-DOS prompt (to prevent date changing with DOS command DATE), Date/Time changing in control panel, Regedit (registry editor), Exit To DOS, and disable the various function keys that modify the boot process, such as F5 and F8. Special requirements: None.
